Amphenol® High Frequency Contacts for Multi-pin Connectors

AMPHENOL'S WIDE RANGE OF CONTACTS MEET THE DEMANDS OF MILITARY AND AEROSPACE APPLICATIONS.

Leading in the electrical connection arena, Amphenol products are used on major programs of military and commercial aircraft, military ground vehicles, space applications, missiles/ordnance, and C4ISR equipment.

Amphenol contacts are designed and qualified to a number of military specifications and standards. Always striving to meet or exceed customer needs, Amphenol is a leader in contact manufacturing.

For over 50 years, Amphenol Aerospace has been in the forefront of interconnect design and manufacturing for aerospace and harsh environment applications.

Engineers work with customers to define the proper circuitry for a connector usage - shielding protection, high frequency protection, combinations of contact types in one shell - the optimum design for your application.

Amphenol's high technology computer driven centers for connector and contact production result in quality production and cost reductions with shorter lead and delivery times.

TABLE OF CONTENTS

| Amphenol® High Frequency Contacts Catalog Product Overview | 1-6 |
|-------------------------------------------------------------------------------------|---------|

Amphenol Aerospace operates a Quality System that is third-party certified to ISO-9001:2000 and AS9100.

The Amphenol Corporation is known as the System Designer's Choice for electrical and optical connections when performance, quality and high reliability are paramount

Breakaway Failsafe D38999 Connector with coax and power contacts

38999 Connector with Quadrax Contacts

New High Frequency 38999 Connector with special size 8 coax contacts that provide DC to 40 GHz microwave performance

Amphenol® High Frequency Contacts provide high speed transmission and operate in high frequency conditions

When you need superior electrical performance plus shielding to eliminate interference from outside electrical sources in a connector, Amphenol has the most reliable contact solutions.

Amphenol offers a very wide range of contacts that provide high speed transmission and operate in high frequency conditions. You can be assured of interconnection compatibility when you come to Amphenol for your contact needs as well as your connector needs. Amphenol's expertise in interconnection solutions assures that your contacts will mate properly and will perform to the application specifications of your particular requirements.

MIL-DTL-38999 CONNECTORS - The high performance series most ideal for integrating high speed and high frequency contacts. MIL-DTL-38999, Series I, II and III are by far the choice of connector for today's avionics needs - these subminiature family connectors are ideally suited for the incorporation of shielded contacts.

This catalog is primarily devoted to the high speed and high frequency contact options for use in MIL-DTL-38999 Connectors, which include:

| Coaxial | Concentric Twinax | Triax | Quadrax | Differential Twinax | High Frequency | Transition Adapters |
|------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Pin and socket contacts designed for RF/microwave and shielded wire applica- tions. Sizes 4, 8, 12 & 16 | Pin and socket contacts designed for protection from magnetic and electrostatic interference including nuclear electromagnetic pulse. Sizes 8 & 12 | Pin and socket contacts designed for shielded wire applications with 3 conductors. Sizes 8, 10 & 12 | Size 8 pin and socket contacts. An outer contact with 4 strategically spaced inner contacts forming two 100 or 150 Ohm matched impedance differential pairs. | Size 8 pin and socket contacts. An outer contact with 2 inner contacts spaced to form one 100 or 150 Ohm matched impedance differential pair. | Size 8 Coaxial contacts that provide high frequencies (DC to 40 GHz). Unique "Float Mount" technology maintains tight mechanical tolerances. | Matched impedance quadrax and twinax transition adapters provide a method of launching from the high speed connectors to PCB boards. |

Other series of connectors from Amphenol Aerospace, in addition to 38999 connectors, can incorporate shielded contacts. These include the following (and are also covered in this catalog):

- Amphenol® Heavy Duty Cylindrical Connectors, MIL-DTL-22992 with coax contacts.
- Amphenol® Printed Circuit Board Connectors Rectangular connectors with standard low mating force brush contacts can have hybrid arrangements with coax contacts.
- LRM Interconnects Rectangular module and backplane connectors with standard low mating force brush contacts can have hybrid arrangements with coax contacts.
- Amphenol® ARINC 600 and R27 Rack & Panel Connectors are available with quadrax, coax, twinax and differential twinax contacts.

The Cable Usage Guide is a key reference to help guide you in selecting the contacts best suited to your needs. Since most shielded wire applications start with a fixed requirement for cable types, the guide refers you to the Amphenol connector family utilizing contacts which are compatible with the cable characteristics.

For more information on other Amphenol connectors with shielded contacts:

- Amphenol® Miniature Cylindrical Connectors, MIL-DTL-26482, Series 1 are available with coaxial contacts, size 8 and 12 for crimp and solder type. See catalog 12-070 on-line at www.amphenol-industrial.com, or consult Amphenol Industrial Operations.
- Amphenol® MS/Standard, MIL-DTL-5015 Cylindrical Connectors are available with size 4, 8 and 12 coax contacts. Consult Amphenol Industrial Operations for more information.

For more information on connectors with fiber optics:

 See catalog 12-352, Amphenol® Fiber Optic Interconnect Products for Military, Aerospace and Harsh Environments, on-line at www.amphenol-aerospace.com, or consult Amphenol Aerospace.

See High Frequency Contact Designer's Guide at end of this catalog.

High Speed Quadrax and Differential Twinax Contacts

Amphenol provides the latest technology in high speed contacts - differential twinax and quadrax contacts, size 8, for use in MIL-DTL-38999 Special* Subminiature Cylindrical Connectors.

DIFFERENTIAL TWINAX CONTACTS

High speed Differential Twinax contacts consist of an outer contact with two inner contacts spaced to form one 100 or 150 Ohm controlled impedance differential pair. See pages 15 and 16 for performance data and ordering of Differential Twinax contacts, and consult Amphenol Aerospace for more information.

Differential Twinax Contact

Quadrax Contact

QUADRAX CONTACTS

High speed Quadrax contacts consist of an outer contact with four inner contacts spaced to form two 100 or 150 Ohm controlled impedance differential pair. Both contacts, when used in Amphenol MIL-DTL-38999 Series III and ARINC type connectors, provide an excellent alternative for harsh environment applications such as:

- Ethernet 100 Base-T-100 Ohm
- Gigabit Ethernet 1000 Base-T-100 Ohm
- Fibre Channel-150 Ohm
- IEEE1394B FireWire-110 Ohm

Differential Twinax and Quadrax contact options include:

- · Crimp or printed circuit board termination
- Established designs to accommodate a variety of cable types and gages
- Ground plane connectors can incorporate quadrax contacts. These connections have conductive inserts that ground the outer conductor of the contact body to the shell of the connector. They accommodate size 8 and 12 shielded contacts of which the size 8 can be quadrax type.

See pages 12-14 for performance data of Quadrax contacts. Consult Amphenol Aerospace for further information needed.

Differential Twinax and Quadrax contacts provide high data transfer rates, low power consumption, and excellent EMI capability. They offer controlled impedance of 100 or 150 Ohm and are ideal for use in harsh environments.

D38999 Series III **Ground Plane** Connectors with Quadrax PCB Socket contacts

D38999 Series III with Quadrax and **Power Contacts**

^{*} Requires modified connector to accommodate keyed contacts.

Quadrax Contacts, Quadrax Terminators, Transition Adapters

QUADRAX CONTACTS FOR ARINC CONNECTORS

Amphenol ARINC 600 Rack and Panel connectors can incorporate high speed quadrax contacts as well as coax, twinax and differential twinax contacts. R27 Rack and Panel connectors use the same contacts as ARINC 600 connectors. See Cable Usage Guide and see pages 47 and 48 for more information on these rack and panel connectors.

Quadrax Contact for ARINC Connectors

BOARD LEVEL CONNECTORS WITH COMPLIANT QUADRAX CONTACTS

Amphenol also provides compliant quadrax socket contacts and Quadrax pin contacts with PC tails for attaching to printed circuit boards. See page 17 for more information.

Compliant Quadrax Socket and PCB Tail Quadrax Pin

FEED-THROUGH CONNECTOR WITH QUADRAX CONTACTS

Amphenol's feed-through connector is double-ended for through bulkhead applications. Consult Amphenol for more infomation.

Quadrax Terminators

Amphenol offers a terminator assembly which is a low reactance, resistive impedance match to the characteristic impedance of a transmission line. It is

Quadrax Terminator

used to terminate the far ends of a transmission line or an open tap so that the energy from signals traveling down the transmission line is absorbed within the resistor and not reflected back down the transmission line causing signal interference (noise). Consult Amphenol for more information.

Transition Adapters

In conjunction with its Differential Twinax and Quadrax contacts, Amphenol has developed a full line of Transition Adapters in order to facilitate launching of controlled impedance signals to printed circuit boards. These use differential twinax or quadrax 90° or straight receptacles and they can be either threaded or cable to board direct. The threaded transition adapters provide an ideal method of disconnecting the differential twinax or quadrax connector from the board. See pages 18-20 for further description, performance data and ordering of transition adapters.

High Speed Coax and Twinax Contacts

Optional choices, other than standard crimp or solder 500 cycle and 1500 cycle contacts, are often required for high frequency interconnections. Amphenol offers shielded contacts for RF applications as well as balanced high sensitivity circuits.

SHIELDED COAXIAL CONTACTS

High speed Coax contacts within a connector provide the shielding protection, and many cases the RF/microwave performance, needed in the circuitry of many applications.

Shielded Coax Contacts

All popular series of Amphenol cylindrical connectors and many rectangular connectors are available with coax contacts. Diameters are standardized in sizes 4, 8, 12 and 16 so that coaxial contacts may be interchanged with power contacts in connector arrangements which include those sizes. Popular RG cable types and a variety of other commercial coaxial cables can be accommodated. See page 24 for coax contact performance data. Matched impedance size 12 coax contacts are also available (see page 28). The use of coax contacts within a connector, compared to the use of individual coaxial/shielded connectors, offers advantages of savings in space and weight and no cross-mating difficulties. Coax and standard contacts may be mixed within the connector to meet special signal needs. The connector itself offers further protection and environmental integrity through the grommets and seals used, and coaxial junction is protected by the connector outer shell.

CONCENTRIC TWINAX SHIELDED CONTACTS

High performance shielding capabilities are available with Concentric Twinax contacts. These are designed for protection from magnetic and electrostatic interference including nuclear electro-magnetic pulse. The contact is crimp terminable to twisted shielded cable and is fully scoop-proof (recessed pins) in MIL-DTL-38999 connectors. The concentric twinax contact is engineered to maintain shield integrity through a multi-pin cylindrical connector and does not require contact polarization within the insert. Size 8 concentric twinax contacts were developed for use in MIL-STD-1553B Airborne multiplex data bus applications. Ideal for this application need is the high performance Tri-Start connector with its fully scoop-proof feature of recessed pins.

Concentric Twinax Contacts Size 8

MIL-DTL-38999 Lanyard "Breakaway" Connector with Concentric Twinax Contacts, Qualified for MIL-STD-1760

The concentric twinax contact is crimp terminable to twisted shielded cable. Size 12 concentric twinax contacts were developed for SAAB. They can be used in any size 12 cavity of D38999 I, II or III or SJT connector. Size 8 & 12 coax, triax or twinax contacts or size 16 coax contacts are available in Ground Plane Connectors (See photo preceding page). These are MIL-DTL-38999 Series III connectors for data bus, LAN and coax/triax/twinax transmission lines with conductive inserts that ground the outer contact conductor to the shell. They are sold "less contacts"

Amphenol® Shielded Contacts provide design versatility for electrical circuitry. Shielded contacts are used to eliminate interference from outside electrical sources, when standard crimp or solder contacts are not enough.

MIL-DTL-38999 Connector with High Speed Coax Contacts

Size 8 Coax Pin Contact

Concentric Twinax Size 12 Contacts

MIL-DTL-38999 Connector with Concentric Twinax Contacts

Coax Contacts with Frequency Range of DC to 40 GHz

HIGH FREQUENCY COAX CONTACTS WITH "FLOAT MOUNT" TECHNOLOGY

Amphenol Aerospace now offers DC to 40 GHz size 8 coaxial contacts for the D38999 housing and standard inserts. These contacts can be terminated to a multiple of cable types depending on the application.

High Frequency Size 8 Coax Contacts with "Float Mount Technology

By using standard interfaces that are based on MIL-STD-348 and can be installed in any D38999 size 8 insert, Amphenol has transformed the circular connector industry. This technology expands the use of D38999 connectors to include the microwave transmission lines within the multi-port configuration without change to a custom connector.

The high frequencies are maintained by Amphenol's unique "Float Mount" technology. This technology allows for consistent microwave performance while maintaining tight mechanical tolerances. This consistency provides superior electrical performance and, unlike other blindmate connectors, will maintain an accurate phase length when mated. See page 30 for specifications, performances and ordering of this contact.

Twinax Contacts for Printed Circuit Board Applications

PC TAIL TWINAX CONTACTS

Amphenol provides Printed Circuit Tail Twinax contacts for MIL-DTL-38999 Series I and III cylindrical connectors and also for ARINC 404 and ARINC 600 rectangular connectors. High reliability is assured with factory pre-assembled contacts and standardized termination to the board.

Variety of PC Tail Twinax Contacts

See pages 35-37 for performance data and ordering of PC tail twinax contacts, and consult Amphenol Aerospace for further information needed. Also see Amphenol catalog 12-170, Cylindrical Connectors for Printed Circuit Boards, or Catalog 12-C1, Amphenol's new combined 38999 catalog.

Shielded Triax Contacts

TRIAX CONTACTS WITH THREE CONDUCTORS FOR USE WITH TRIAX CABLE

Amphenol supplies sizes 8, 10 and 12 triax contacts for use in MIL-DTL-38999 Series I, II and III connectors. Triax con-

Triax Contacts

tacts provide additional shielding when terminated to triax cable having solid or stranded center conductors. See cable compatibility in the Cable Usage Guide and performance data and ordering of triax contacts on pages 34-37. Each of the three conductors of the triax contact is separated by dielectric insulation to isolate ground planes and to improve shielding effectiveness. All conductors are crimp terminated for high reliability and ease of assembly. Triax contacts may be specified for direct connection to printed circuit boards. For maximum system flexibility, triax contacts may be mixed with coax, twinax and power contacts in a single connector.

HF38999 - D38999 Connectors with High Frequency Coax Contacts

D38999 Connectors with PC Tail Twinax Contacts

Printed Circuit Twinax Contacts provide a cost effective packaging solution for limited space applications where connectors are attached to printed circuit boards.

Cable Systems with High **Frequency Contacts**

CABLE ASSEMBLY CAPABILITIES

Amphenol provides a large array of cable assemblies with high speed quadrax and differential twinax contacts, as well as coax and concentric twinax contacts. This page shows a few examples. The Cable Usage Guide pages that follow list the design possibilities for these high speed contacts.

Amphenol strives to offer customers the widest range of cable assemblies, keeping abreast of the latest cable types in the marketplace. Please consult with the contact product managers at Amphenol Aerospace for assistance in designing the cable assembly that suits your particular needs. From a simple one-cable interconnection, to a multiple cable system, Amphenol can design and supply your cable needs for high frequency contacts and connectors. See the High Frequency Contact Designer's Guide at the end of this catalog

Variety of Quadrax Cable Assemblies

TESTING OF CABLES

Rigid testing is performed 100% on cable assemblies at Amphenol before they are shipped to make sure they meet customer requirements. These requirements include tests such as DWV, resistance and continuity. Amphenol has the background experience and understanding of harsh environmental testing to assure reliable "end-to-end" interconnect solutions.

Cable Usage Guide

Use the Cable Usage Guide on pages 7-9 as follows:

- 1. Locate the cable you are using in Cable Type column. For cables not listed consult Amphenol Aerospace.
- 2. Refer to the Amphenol Connector section which features contacts/adapters for this cable. Connector size, performance features and insert pattern availability may influence your choice.
- Order your connector and contacts or transition adapters by following the procedure given in the section for the
 connector series selected. These instructions are supplemented by the Amphenol Catalog Section covering the basic
 connector.

Cable Usage Guide, cont.

Use the Cable Usage Guides on this page for Coax Contacts as follows:

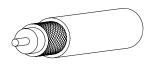

- 1. Locate the cable you are using in Cable Type column. For cables not listed consult Amphenol Aerospace.
- 2. Refer to the Amphenol connector section which features contacts for this cable, as indicated by a in the appropriate column. If more than one connector series utilizes contacts designed for your cable, investigate each of them. Connector size, performance features and insert pattern availability may influence your choice.
- 3. Order your connector and coax contact by following the procedure given in the section for the connector series selected. These instructions are supplemented by the Amphenol Catalog Section covering the basic connector.
- 4. The Additional Contacts column of this guide is used to indicate an additional availability of contact designs for older cable types or capability. Consult Amphenol Aerospace for further information.

For Cable not found in the Coax Contact Cable Usage Guide, refer to these general dimensional ranges: (In general, for D38999 Connectors, the size 8, 12 and 16 Coax Contacts will terminate cable in the following ranges)

SIZE 16

| .012 / .0215 Center Conductor (Standed) |
|------------------------------------------------------------|
| .031 / .066 Dielectric |
| .085 Max Outer braid (must be round for crimp termination) |
| .102 Max. Jacket |

SIZE 12

| SIZL 1Z |
|------------------------------------------------------------|
| .012 / .0215 Center Conductor (Standed) |
| .031 / .105 Dielectric |
| .126 Max Outer braid (must be round for crimp termination) |
| .145 Max. Jacket |

SIZE 8

| .012 / .0395 Center Conductor (Standed) |
|------------------------------------------------------------|
| .055 / .133 Dielectric |
| .180 Max Outer braid (must be round for crimp termination) |
| .201 Max. Jacket |

Special coax contacts may be available for cables outside of ranges shown. Consult Amphenol Aerospace for further assistance in selection of coax contact cables.

Subminiature Cylindrical Connector Overview

Amphenol® Subminiature Connectors are ideally suited for the incorporation of shielded contacts for high performance interconnection applications. The Subminiature family is built around MIL-DTL-38999 specifications, with Mil-approved and proprietary styles offered. Normal operating voltage for Subminiatures with power contacts only is up to 900 VAC (RMS) at sea level.

Subminiature Cylindricals offer these features for contact termination flexibility:

- Widest selection of insert arrangements that can incorporate:
 - size 8 high speed Quadrax and Differential Twinax contacts for MIL-DTL-38999 Series III (specially modified to accommodate keyed contacts)
 - Transition adapters for use in attaching D38999 Series III connectors with high speed quadrax or differential contacts to PCB boards
 - size 8, 12 and 16 Coax contacts
 - size 8 and 12 Twinax contacts
- size 8, 10 & 12 Triax contacts
- Wide selection of connector shell styles and sizes
- Scoop-Proof recessed design in LJT-R, TV-R and SJT-R connectors provide protection for
- Standard power contacts are crimp rear release, qualified to SAE AS39029
- Coax, Twinax, and Triax contacts employ the same retention system as power contacts, simplifying user substitution

GENERAL ORDERING INFORMATION

Amphenol Subminiature Cylindricals, which feature rear removable contacts, are normally supplied with a full complement of power contacts, separately packaged. Coax, twinax and triax contacts are ordered by part number as referenced in the part number charts on the following pages of this catalog, and are substituted for the power contacts at the time of the cable or equipment assembly. If the application is for coax, twinax or triax contacts only, the connector may be ordered less contacts and no power contacts will be supplied.

HOW TO ORDER CONNECTORS AND HIGH FREQUENCY CONTACTS

- A. Select the Subminiature Series desired. (See features of each series given briefly on this page and in-depth in series catalogs, which are on-line at www.amphenol-aerospace.com). Catalog 12-090* - JT-R, LJT-R Connectors

 - Catalog 12-092* TV-R Connectors
 - Catalog 12-091* SJT-R Connectors
 - Catalog 12-C1* Combined 38999 Cylindrical Connectors Catalog 12-094 - Amphe-Lite (Industrial 38999 type)
- B. Select the quadrax, differential twinax, coax, twinax and/or triax contacts or the transition adapters that are needed from the tables on the following Subminiature Cylindrical pages that correspond to the cable being used.
- C. Select the insert arrangement to accommodate required number of contacts. Insert patterns for quadrax and differential twinax contacts are on pages 21, 22. Insert patterns for coax, twinax and triax contacts are on pages 38-40.
- D. Complete the connector part number from the connector series catalog, incorporating the chosen insert pattern number. See detailed how to order page 23 for ordering 38999, Series III with quadrax and differential twinax contacts. Consult Amphenol for assistance in ordering 38999 cylindricals with coax, twinax and triax contacts.
- E. Consult Amphenol Aerospace for ordering information for connectors with PC tail contacts, and for transition adapters.
- F. If connector is ordered less contacts, power contacts and/or sealing plugs may be ordered separately to fill out the insert arrangement.

See Catalog 12-092 or Catalog 12-C1* for complete information on this series.

- High performance capability series for both general duty and severe environment
- Öffers the widest range of Subminiature Family Mil-Spec qualified options in contact and connector styles
- Threaded coupling; completely mates in one turn; crimp termination
- Superior EMI/EMP shielding effectiveness
- Scoop-proof design (recessed pins)
- Available in aluminum, stainless steel and firewall, or lightweight composite styles

LJT-R, D38999 Series I

See Catalog 12-090 or Catalog 12-C1* for complete information on this series.

- Scoop-proof (recessed pins)
- Bayonet coupling, crimp termination
 Also available in solder termination types under MIL-DTL-27599 Series II

Amphe-Lite, 38999 Type See Catalog 12-094 for complete information on this series.

- Commercial/Industrial 38999 Series III type
- Cost effective high performance connector for severe environments or general duty industrial applications
- Consult Amphenol Industrial Operations for further information

SJT-R, 38999 Type See Catalog 12-091 or Catalog

12-C1* for complete information on this series.

- Amphenol proprietary series (non-MS) which is a further expansion of the basic JT family, but incorporates the LJT scoop-proof design
- Compliant with several European specifications

NOTE: SAE AS39029 supersedes MIL-C-39029. NOTE: MIL-DTL-38999 supersedes MIL-C-38999. MIL-DTL-27599 supersedes MIL-C-27599

* New Amphenol Catalog 12-C1 will combine 38999 Series I, II and III and SJT Series in one catalog. It will also include 38999 with Filter/ Transient Protection and with PC Tails.

See Catalog 12-090 or Catalog 12-C1* for

· Shorter profile connector series for applica-

tions requiring maximum space savings

Also available in solder termination types

Bayonet coupling, crimp termination

under MIL-DTL-27599 Series II

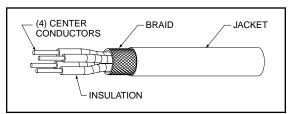

complete information on this series.

Quadrax Contacts for MIL-DTL-38999, Series III Cylindricals

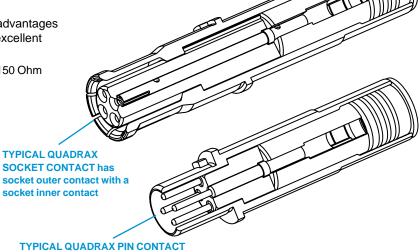

general description

Amphenol® Quadrax Contacts offer several advantages for high data transfer rates, low power consumption and excellent EMI compatibility:

- Four strategically spaced inner contacts form two 100 or 150 Ohm matched impedance differential pairs
- · Outer contact has rugged wall section for durability
- Available in size 8 crimp termination style
- Also available in size 8 with PC tails (see page 14)
- Requires modification of MIL-DTL-38999 connector to accommodate keyed contacts

Cable Illustration - Quadrax Contact

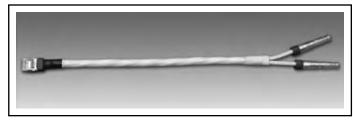

TYPICAL QUADRAX PIN CONTACT has pin outer contact with a pin inner

Quadrax Pin with 8P8C "RJ45" Jack

Quadrax Pin Size 8 and MIL-DTL-38999 Series III Connector

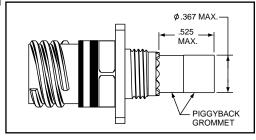

Quadrax in an Eight Wire Gigabit Ethernet Assembly

Suggested Strain Relief - Insert Arrangements 9-5 or 19-18 with Quadrax Contacts

Due to the piggyback grommet interference with normal strain reliefs on the

shell size 9 only, the recommended strain relief for the connector is: Amphenol part number TGW-R-5309-10 (OD Cad) or TGF-R-5309-10 (Electroless nickel) shell size 9 only.

For 19-18 insert pattern, recommended backshell: Glenair 367-221-NF. This is recommended due to the proximity of the size 8 contacts in relation to the shell.

Also see Quadrax contacts for ARINC 600 and R27 Rack and Panel Connectors on page 47 and 48.

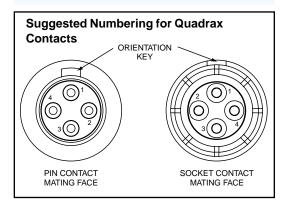

Quadrax Contacts are gold plated, crimp termination

Finish of mating contacts parts: supplied with 0.000050 min. gold over nickel on mating parts. Consult Amphenol for availability of other finishes.

Quadrax Size 8 Contact Performance:

- Bandwidth: Up to 3 Gigahertz
- Data Rate: Exceeding 3 Gbits/sec.
- Voltage Rating: 500 Vrms max. @ sea level
- Dielectric Withstanding Voltage:
 1000 VAC rms between all inner contacts @
 sea level

500 VAC rms between inner and outer contacts @ sea level

See page 23 for part number ordering of popularly used 38999 Series III connectors with 100 ohm quadrax contacts.

CHART CONTINUES ON NEXT PAGE

QUADRAX CONTACT DATA

Contacts are inserted by hand. Refer to termination instructions listed.

Contacts are removed with a removal tool. Recommended tool is

MIL-I-81969/14-06, Daniels DRK-264-8. Refer to termination instructions listed.

Finish of mating contact parts: Contact part numbers shown in the chart above are supplied gold plated per ASTM B488 Type II, Code C, .000050 min. thick over nickel plate per AMS-QQ-N-290, Class 2, .000030/.000150 thick.

CONTACT ORDERING: Example number given in chart 21-33384-21 should be ordered as 21-033384-021; example number 21-33384-151 should be ordered as 21-033384-151. Adding Zeros is necessary for Amphenol ordering process on all contact numbers

Daniels crimping tools are available from Daniels Mfg. Corp. 6103 Anno Ave., Orlando, FL 32809

- * Requires modified connector to accommodate keyed contacts.
- **Termination instructions are packaged with each contact and can be found on-line at: www.amphenol-aerospace.com/service instructions.asp
- † Consult Amphenol Aerospace for current release of this contact or instruction sheet if applicable.
- †† Test reports available for indicated protocols. Consult Amphenol Aerospace.

Differential Twinax Contacts for MIL-DTL-38999, Series III Cylindricals

general description

Amphenol® Differential Twinax Contacts - offer

several advantages for high data transfer rates, low power consumption and excellent EMI compatibility:

- Two strategically spaced inner contacts form two 100 or 150 Ohm matched impedance differential pairs
- Outer contact has rugged wall section for durability
- Available in size 8 crimp termination style
- Also available in size 8 with PC tails (see page 16)
- Requires modification of MIL-DTL-38999 connector to accommodate keyed contacts

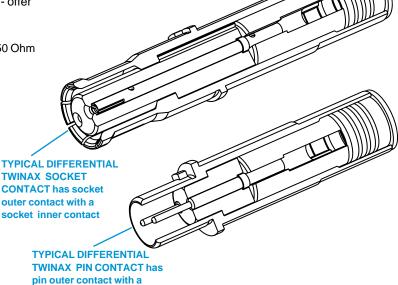

Cable Illustration - Differential Twinax Contact

Differential Twinax Socket Contact

Differential Twinax Pin Contact

Differential Twinax Contacts are gold plated, crimp termination

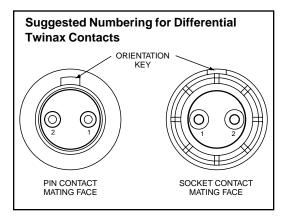

Finish of mating contacts parts: supplied with 0.000050 min. gold over nickel on mating parts. Consult Amphenol for availability of other finishes.

Differential Twinax Size 8 Contact Performance:

• Bandwidth: Up to 3 Gigahertz

pin inner contact

- Data Rate: Exceeding 3 Gbits/sec.
- Voltage Rating: 500 Vrms max. @ sea level
- Dielectric Withstanding Voltage:
 1000 VAC rms between all inner contacts @ sea level
 500 VAC rms between inner and outer contacts @ sea level

DIFFERENTIAL TWINAX CONTACT DATA

Contacts are inserted by hand. Refer to termination instructions listed. Contacts are removed with a removal tool. Recommended tool is MIL-I-81969/14-06, Daniels DRK-264-8. Refer to termination instructions listed.

Finish of mating contact parts: Contact part numbers shown in the chart above are supplied gold plated per ASTM B488 Type II, Code C, .000050 min. thick over nickel plate per AMS-QQ-N-290, Class 2, .000030/.000150 thick.

CONTACT ORDERING: Example number given in chart above 21-33387-21 should be ordered as 21-033387-021; example number given in chart left 21-33834-1 should be ordered as 21-033834-001. Adding Zeros is necessary for Amphenol ordering process on all contact numbers

Daniels crimping tools are available from Daniels Mfg. Corp. 6103 Anno Ave., Orlando, FL 32809

- * Requires modified connector to accommodate keyed contacts.
- *** Indicated contact is vacuum degassed
- †† Test reports available for indicated protocols. Consult Amphenol Aerospace.
- **Termination instructions are packaged with each contact and can be found on-line at: www.amphenol-aerospace.com/service instructions.asp
- † Consult Amphenol Aerospace for current release of this instruction sheet.

Indicated length given in chart at left is the distance from the rear of the contact retention shoulder to the tip of the PCB tails.

LENGTH
INDICATED IN
TABLE COLUMN

Note: it does not indicate stickout length when installed in D38999 connector.

Compliant Quadrax Contacts and PC Tail Quadrax Contacts for Attachment to PC Boards general description

Amphenol® Quadrax Contacts for Printed

Circuit Board Attachment - available for MIL-DTL-38999 Series III Cylindrical connectors with straight PC tail termination and with compliant pin termination. These provide the ideal solution for bringing high speed data transmission to the board.

Compliant Pin Quadrax and PC Tail Quadrax Contacts

MIL-DTL-38999, SERIES III CONNECTOR WITH PC TAIL CONTACTS. This arrangement has 33 size 22D and 2 Quadrax PC tail contacts.

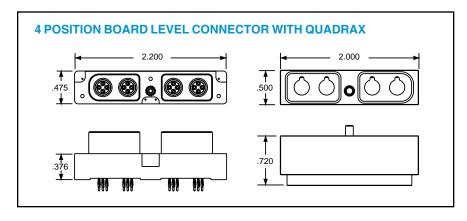

MIL-DTL-38999, SERIES III CONNECTOR WITH PC TAIL CONTACTS. This arrangement has 8 Quadrax PC tail contacts.

Amphenol® Quadrax Contacts for Rectangular Board Level

Connectors - incorporate the same size 8 Quadrax PCB contacts as used in cylindrical 38999 connectors.

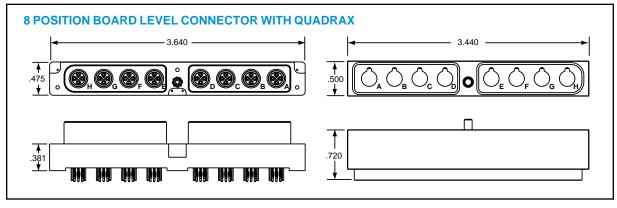

- Size 8 Quadrax Compliant contacts with hole diameters: .025 ±.002 PTH Quadrax contact .040 ±.003 PTH shell grounding
- Accommodates backplane .125 inch min. thickness

 Consult Amphenol Aerospace for availability of additional connector configurations

Compliant Pin Quadrax Board Level Connector

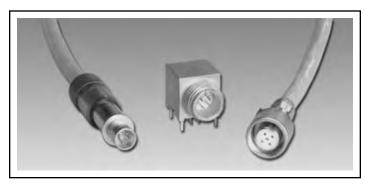

Quadrax Transition Adapters and Differential Twinax Transition Adapters

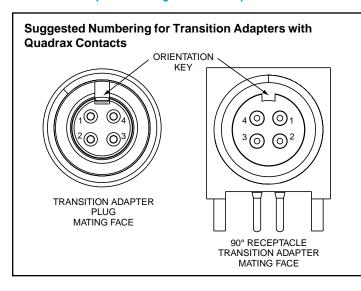

general description

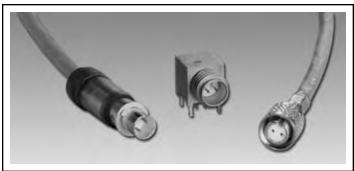

Amphenol® Transition Adapters - are used to facilitate launching of controlled impedance signals to printed circuit boards. Amphenol provides transition adapters in both contact types:

- Quadrax transition adapters, 90° or straight receptacles threaded or cable to board style
- Differential twinax transition adapters, 90° or straight receptacles, threaded or cable to board style

90° Quadrax Receptacle and Plug Transition Adapter

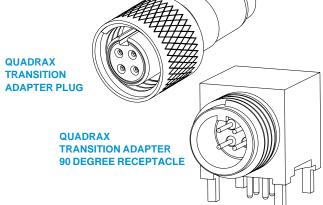

90° Differential Twinax Receptacle and Plug Transition Adapter

TRANSITION ADAPTER DATA

Finish of mating contact parts: Contacts are supplied gold plated per ASTM B488 Type II, Code C, .000050 min. thick over nickel plate per AMS-QQ-N-290, Class 2, .000030/.000150 thick.

CONTACT ORDERING: Example number given in chart 21-33832-21 should be ordered as 21-033832-021; example number 21-338373-141 should be ordered as 21-033833-141. Adding Zeros is necessary for Amphenol ordering process on all contact numbers.

^{**}Termination instructions are packaged with each contact and can be found on-line at: www.amphenol-aerospace.com/service instructions.asp

[†] Consult Amphenol Aerospace for current release of this adapter and instruction sheet if applicable.

Insert Patterns - for MIL-DTL-38999, Series III Cylindricals

Incorporating quadrax and differential twinax contacts

This illustrated listing represents the most readily available patterns incorporating quadrax and differential twinax contacts within D38999, Series III cylindrical connectors. If you require other arrangements than what are shown here, consult Amphenol for further availability. In most cases, unless otherwise stated, size 8 cavities can be filled with quadrax or differential twinax contacts. Arrangements can be mixed with any size 8 coax, and/or concentric twinax or triax contacts.

How to Order 38999, Series III Cylindricals With quadrax 100 ohm contacts

Amphenol Tri-Start, 38999 Series III* Connectors can be ordered with the following popularly used Quadrax contacts: 100 ohm quadrax 21-033385-051 socket contacts 100 ohm quadrax 21-033384-051 pin contacts
Use the following coded number ordering procedure:

For ordering of connectors with any other quadrax contacts or differential twinax contacts, please consult Amphenol Aerospace for part numbers.

Connector Type

TV designates Tri-Start Series Connector with metal shells
TVP designates back panel mounted receptacle with metal shells
CTV designates Tri-Start Series Connector with composite shells
CTVP designates back panel mounted receptacle with composite

Shell Style

00 designates wall mount receptacle

02 designates box mount receptacle available only with the

PCB tails and epoxy backfilled (non-removable)

06 designates straight plug07 designates jam nut receptacle

Service Classes with Quadrax

RQF electroless nickel plated aluminum

RGQF electroless nickel plated ground plane aluminum

RQW olive drab cadmium plate

RGQW olive drab cadmium plated ground plane aluminum

RQB NiAlBronze

RGQB NiAlBronze ground plane

RQK corrosion resistance stainless steel

RGQK stainless steel ground plane

DN Durmalon plated, Nickel-PTFE alternative to cadmium

Shell Size / Insert Arrangement

See insert arrangements available with quadrax contacts on preceding pages 21 and 22.

Contact Type

P designates pin contacts
S designates socket contacts

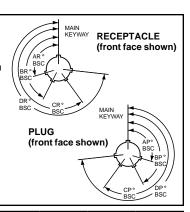

Alternate Positions

Locksmith keying - rotation of minor keys. See Tri-Start Alternate Postions at right. "N" not required for normal postion

For more information on Tri-Start, MIL-DTL-38999 Series III connectors see catalog 12-092 or catalog 12-C1. New Amphenol Catalog 12-C1 will combine 38999 Series I, II and III and SJT Series in one catalog. It will also include 38999 with Filter/Transient Protection and with PC Tails

Tri-Start Alternate Positions

A plug with a given rotation letter will mate with a receptacle with the same rotation letter. The angles for a given connector are the same whether it contains pins or sockets. Inserts are not rotated in conjunction with the master key/keyway.

^{*} The incorporation of quadrax or differential twinax contacts requires a modified connector to accommodate keyed contacts.

Coaxial Contacts for Subminiature Cylindricals general description

Amphenol® Coaxial Contacts offer several advantages

for reliable interconnection and continued performance:

- Large crimping area assures low contact resistance and high tensile strength
- Back insulator positively captivates inner contact against axial loads
- Front insulator provides closed entry for socket inner contact
- Recessed inner contact is protected
- Outer contact has rugged wall section for durability

TYPICAL SUBMINIATURE COAX SOCKET CONTACT has socket outer contact with a pin inner contact

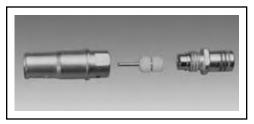

LJT-R, JT-R, TV-R, SJT-R MS Type, Coax Size 12 Socket Assembled Contact

LJT-R, JT-R, TV-R, SJT-R MS Type, Coax Size 16 Pin Unassembled Contact

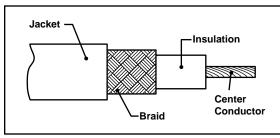

LJT-R, JT-R, TV-R, SJT-R MS Type, Coax Size 8 Pin Assembled Contact

LJT-R, JT-R, TV-R, SJT-R MS Type, Coax Size 8 Socket Unassembled Contact

Cable Illustration - Coax Contact

Coax Contacts are gold plated, crimp termination

Finish of mating contacts parts: supplied with 0.000050 min. gold over nickel on mating parts. Other finishes are available; consult Amphenol for further information.

Coax Size 12 & 16 Contact Performance:

- Typical VSWR: 1.5:1 maximum up to 700 MHz and 500 MHz respectively, for properly cabled size 12 and 16 coaxial contacts in the M38999 Series I, II and III
- Insulation Resistance: 5,000 megohms minimum @ 25°C
- Dielectric Withstanding Voltage:
 Size 12: 1,000 VAC Rms @ sea level, 250 VAC Rms @ 50,000 ft.
 Size 16: 800 VAC Rms @ sea level, 250 VAC Rms @ 50,000 ft.
- Contact Resistance: See MIL-C-39029/27, /28, /75, /76, /77, /78

Coax Size 8 Contact Performance:

- Typical VSWR when terminated to specified 50 ohm cable: 1.5:1 maximum up to 3 GHz (excluding 21-33101/2-27)
- Insulation Resistance: 5,000 megohms minimum @ 25°C
- Dielectric Withstanding Voltage:
 1,300 VAC Rms @ sea level, 250 VAC Rms @ 50,000 ft.
- Contact Resistance: See MIL-C-39029/59, /60

CONTACT ORDERING: Example number given in chart 21-33122-564 should be ordered as 21-033122-564. Adding Zeros is necessary for Amphenol ordering process on all contact numbers

† Consult Amphenol Aerospace for current release of this contact or instruction sheet if applicable.

NOTE: SAE AS39029 supersedes MIL-C-39029

**Termination instructions are packaged with each contact and can be found on-line at:

www.amphenol-aerospace.com/service instructions.asp

SUBMINIATURE CONTACT DATA

All contacts mate with other contacts in this series which have the same inner and outer contact diameters. ${\sf JT}$

Example: Socket 21-33121-564 on RG-196A/U cable will mate with pin 21-33122-563 on RG-188A/U

cable which is used in both this and the LJT-R series.

LJT, TV, SJT, Amphe-Lite

Example: Socket 21-33123-564 on RG-196A/U cable will mate with pin 21-33122-563 on RG-188A/U

cable which is used in both this and the JT-R series.

Finish of mating contact parts: Contact part numbers shown in the chart above are supplied with 0.000050 min. gold (Knoop hardness 130-200) over nickel on mating parts. Other finishes are available; consult Amphenol.

Matched Impedance Coaxial Contacts for Subminiature Cylindricals

Amphenol® Matched Impedance Size 12 Coaxial Contacts For RF/Microwave, High Frequency and High Performance Requirements

The matched impedance coax contact is available in size 12. It incorporates a captivated inner contact which "snaps into" the outer contact preventing displacement or pull back of the inner contact in situations where the cable may be bent.

TYPICAL MATCHED IMPEDANCE COAX SOCKET CONTACT

has socket outer contact with a captivated pin inner contact

TYPICAL MATCHED IMPEDANCE COAX PIN CONTACT

has pin outer contact with a captivated socket inner contact

- For use in 90 degree angle or bent cable applications
- Provides 50 ohm matched impedance resulting in low VSWR and low insertion loss
- Frequency range for a mated pair extends to 3 GHz and beyond, higher than other coaxial contacts previously offered.
- Ideally suited for D38999 high performance and MIL-STD-1760 high band coaxial contact requirements

High Performance Size 12 Coax 50 Ohm matched

***Termination instructions are packaged with each contact and can be found on-line at: www.amphenol-aerospace.com/service instructions.asp

Matched Impedance Coax Contact Performance:

Electrical Specifications:

- Contact impedance = 50 ohms nominal
- Frequency range = 0–3 GHz
 Operable at higher frequencies depending on cable selection. Consult Amphenol for details.
- Dielectric withstanding voltage (for a mated pair):
 At sea level = 1000 VRMS
 At 50, 000 ft. = 250 VRMS
- Insulation resistance: 5 gigaohms min. @ 25°C
- VSWR: 1.20 + .04F (F in GHz) max. up to 3 GHz
- Insertion Loss: .11 √ fGHz dB max.

Environmental Specifications:

• Thermal limits: -55 ° to 200°C

Mechanical Specifications:

- Mating: slide-on
- Mounting: conforms to M39029/102 & /103 envelope dimensions

Typical Contact Installation Instructions for Coax Contacts

The following is an example of a contact instruction sheet that would be shipped within the package of contacts for a Crimp, Size 12 Coax Contact for use in Subminiature, D38999 connectors. The sheet provides detailed instructions for assembling the component parts and for crimping the contact to coaxial cable, along with the recommended cable and tooling to be used. Installation instructions are included within all contacts for D38999 connectors. For installation instructions for other connector series, there are separate documents (not included in packaging of parts) as follows: L- 633 for Miniature solder types, L-613 for Miniature SE types, L-660 for Miniature CE types, and L-650 for MS/Standard and Heavy Duty types. For any other instructions needed, consult Amphenol. Most installation instructions can be found on-line at www.amphenol-aerospace.com (from home page, go to Service Instructions and enter contact part number or instruction sheet number).

Contact, Pin and Socket, Coaxial,
Type LJT-R & TV-R, (MIL-DTL-38999 Series I & III) Crimp, Size 12
Installation Instructions

See table on reverse side for coaxial cable recommended and crimp tool information.

- A. 1. Slide outer crimp ferrule over cable outer jacket as shown.
 - Strip cable outer braid as illustrated. Ends must be cut cleanly and at right angles to the axial plane of the cable. The cable must not be deformed while making cuts.
 - 3. Flare outer braid, then strip cable dielectric as shown.
- B. 1. Assemble inner contact assembly over cable center conductor and cable dielectric until inside bore of bushing butts against cable dielectric.
 - 2. Cable center conductor must be visible through the inspection hole in the inner contact wire well.
 - 3. Crimp inner contact wire well using crimp tool listed in table.
- C. 1. Carefully slide outer contact assembly over inner contact assembly and under cable outer braid until inner contact butts against insulator shoulder as illustrated. (Inner contact assembly will snap into the locked position when fully assembled inside the outer contact assembly.)
 - Bring outer crimp ferrule forward over cable outer braid as illustrated. (Continue to push the inner contact assembly fully forward while bringing the outer crimp ferrule into position.)
 - Crimp outer crimp ferrule using crimp tool listed in table (.156
 Max. over ferrule after crimping). Trim excess braid ahead of
 crimp ferrule, if necessary.

CONTACT INSERTION INTO CONNECTOR

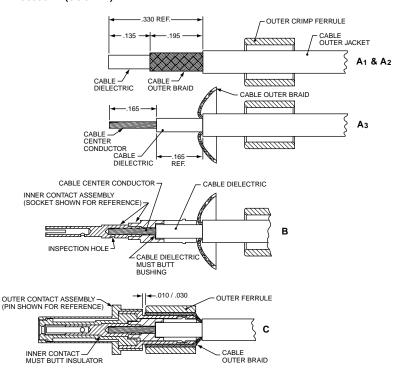

Using insertion tool (part number M81969/8-09 or M81969/14-04), insert contact assembly into rear connector grommet hole. Contact must be aligned with hole and not inserted at an angle. Push forward until contact is felt to snap into position within insert. Remove tool.

CONTACT REMOVAL FROM CONNECTOR

Position removal tool (part number M81969/8-10 or M81969/14-04) around cable and slide tool down wire until tool tips enter rear grommet and come to a positive stop. Hold tool tip firmly against positive stop on contact, grip wire and simultaneously remove tool, contact and cable.

High Frequency Contacts for MIL-DTL-38999, Series III Cylindricals

general description

Amphenol® High Frequency Contacts

Amphenol and SV Microwave (an Amphenol company) offer DC to 40 GHz high frequency size 8 coaxial contacts for the D38999 Series III housing and standard inserts. These contacts allow any application to continue to use the D38999 connector and be able to expand the use to include the microwave transmission lines. Features include:

- Superior electrical performance and high frequency capability
- Blindmate advantage and maintance of an accurate phase length when mated
- Can be terminated to a multiple of cable types depending on the application
- Uses standard interfaces based on MIL-STD-348, and can be installed in any D38999 size 8 insert
- Unique "Float Mount" technology allows for consistent microwave performance while maintaining tight mechanical tolerances

Most readily available D38999 insert arrangements for high frequency contacts are the same as arrangements for quadrax and differential twinax contacts shown on pages 21 and 22. Consult Amphenol for further availability of arrangements. Size 8 cavities can be filled with these high frequency contacts.

Twinax Contacts for Subminiature Cylindricals

general description, application data - size 10 &12

Amphenol®Twinax Contacts were designed for use with twinax cable in Data Bus systems. Twinax contacts provide the following benefits:

- · Protection from magnetic interference
- Protection from electrostatic interference including nuclear electromagnetic pulse
- · Meets parameters defined by MIL-STD-1553B
- Maintains shield integrity through a multi-pin cylindrical connector and does not require contact polarization within the insert

Cable Illustration - Twinax Contact

SIZE 10 & 12 CONCENTRIC TWINAX CONTACTS

The size 12 concentric twinax contact interface was developed for JN1104 EuroFighter contacts, and can be used in any size 12 cavity M38999 I, II or III or SJT connector.

Features:

- Operating temperature –55°C to 175°C
- Pins are scoop-proof
- Meets performance levels of M38999 connector
- 4 components, gold plated crimp termination
- For use with a variety of cables (See chart below)

^{**}Termination instructions are packaged with each contact and can be found on-line at: www.amphenol-aerospace.com/service instructions.asp

Twinax Contacts for Subminiature Cylindricals

general description, application data - size 8

High performance connectors within the D38999 families are the most commonly used connectors for incorporation of twinax contacts. These connectors offer wide versatility in insert arrangements for not only concentric twinax contacts, but also coax, triax, PCB, wire wrap, thermocouples and EMI filter contacts.

Other connectors available with concentric twinax contacts:

- Wire Integrated Connectors (WICS) for Data Bus Systems. Consult Amphenol Aerospace, Sidney, NY.
- ARINC 404, ARINC 600 and R27 Series rectangular connectors.
 Supplied by Amphenol Canada.

SIZE 8 CONCENTRIC TWINAX CONTACTS

The size 8 concentric twinax contact was developed for use in MIL-STD-1553 Airborne multiplex data bus applications which require high performance interconnect characteristics in multi-pin connectors. Ideal for this application need is the high performance Tri-Start connector with its fully scoop-proof feature of recessed pins. The concentric twinax contact is crimp terminable to twisted shielded cable. Features include:

- Provides protection from magnetic and electrostatic interference including nuclear electromagnetic pulse
- Maintains shield integrity through a multi-pin cylindrical connector and does not require contact polarization within the insert
- 175°C rated and meets performance levels of MIL-DTL-38999 Series III connectors
- MIL-C-17/176-00002 cable termination
- Gold plated full crimp termination contacts qualified to M39029/90 & /91
- Integral part of the MIL-STD-1760 interconnection system
- Also available in modified but intermateable versions for termination to a host of cables (See chart on next page)

TYPICAL ELECTRICAL PERFORMANCE

Triax Contacts for Subminiature Cylindricals

general description, application data

Amphenol® Triax Contacts provide additional shielding when terminated to triax cable having solid or stranded center conductors. Amphenol supplies triax contacts in sizes 8, 10 and 12 and they are ideally suited for use in D38999 Series I, II and III cylindrical connectors.

Features and benefits of Amphenol triax contacts include:

- · Incorporates three conductors, designed for use with triax cable
- Each of the three conductors are separated by dielectric insulation to isolate ground planes
- Shielding effectiveness is improved with two isolated shields
- · May be specified for direct connection to printed circuit boards
- May be mixed with coax, twinax and power contacts in a single connector

Coax, Twinax & Triax PC Tail Contacts for Subminiature Cylindricals general description, application data

Amphenol Printed Circuit Tail Contacts are currently supplied as follows:

- 8. 12 and 16 Coax
- 8, 10 and 12 Twinax
- 8 Triax (socket only)

PC Tail shielded contacts provide a cost effective packaging solution for limited space applications where connectors are attached to printed circuit boards. High reliability is assured with factory pre-assembled contacts and standardization termination to the board. PC Tail contacts are available for MIL-DTL-38999 Series I and III cylindrical connectors and also for ARINC 404, ARINC 600 and R27 rectangular connectors. The following pages (36 & 37) show the available PC Tail contact part numbers for Subminiature Cylindricals. See the Rectangular Section of this catalog for information on twinax contacts for ARINC Rectangular connectors along with compatible cable terminations. Consult Amphenol Aerospace for further information on the applicable tooling for these contacts.

TYPICAL ELECTRICAL PERFORMANCE Size 8, 12 & 16 PC Tail Coax Contacts

^{**} Size 12 twinax and triax contacts are intermatable.

[†] Consult Amphenol Aerospace for current release of this contact.

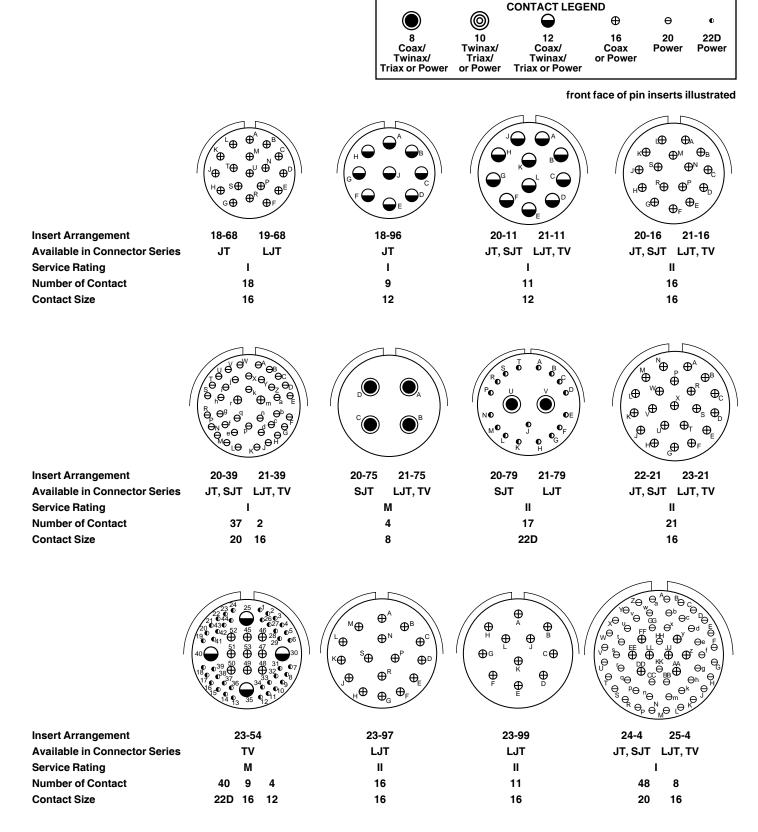

Insert Patterns - Subminiature Cylindricals Incorporating coax, twinax and triax contacts

The following pages show the most popular insert arrangements within the Subminiature Cylindrical Connector Family. See page 11 for Subminiature Connector descriptions and for reference to detailed connector catalogs. This illustrated listing represents the most readily available patterns within the Subminiature Series. If you require other arrangements than what are shown here, consult Amphenol for further availability. In most cases, unless otherwise stated, size 8 and size 12 cavities can be filled with either coax, twinax, triax or power

^{*} For use in MIL-STD-1760 applications with MIL-DTL-38999 Series III.

Standard MIL-DTL-5015, Heavy Duty MIL-DTL-22992 Cylindrical Connectors Overview

Amphenol's medium to heavy weight cylindricals include the MS/Standard MIL-DTL-5015 series and the heaviest weight, largest size cylindrical is the Heavy Duty MIL-DTL-22992 series. These time-tested cylindricals have been used for several years. They are dependable general duty and environmentally resistant connectors for military and industrial applications. Shielded coax contacts, although more popularly used in 38999 types and 26482 types, can be incorporated into some arrangements of the 5015 and 22992 type cylindricals. Shielded coaxial contacts within these series are considered MS modifications to the MIL-spec connector and the coax contacts are pre-installed in the connector. Normal operating voltage with power contacts only is up to 3000 VAC (RMS) at sea level for MIL-DTL-5015 cylindricals. The Heavy Duty types are designed for high current capacity and have current ratings (with power contacts only) of up to 200 amps.

Standard and Heavy Duty Cylindricals offer these features for contact termination flexibility:

- Insert arrangements that can incorporate:
 - Size 4, 8 & 12 Crimp Coax contacts, pre-installed in the connector
- Wide selection of connector shell styles and sizes
- Standard power contact options within the various connector styles include: solder type, crimp front release, crimp rear release
- Coax contacts are designed to the same high performance standards as power contacts.
 Coax and power contacts may be intermixed with no degradation of connector reliability.

See Catalog 12-020 for complete information on these styles.

MS-A, MS-C, MS-E, MS-F, MS-R

- Produced in strict accordance with MIL-DTL-5015
- Threaded coupling, solder or crimp rear insertion contacts (coax available in crimp type only)
- Class A, Solid Shell intended for general connector usage
- Class C, Pressurized for use on pressurized bulkheads or pressure barriers
- Class E/F, Environmental Resisting ideally suited for installation where condensation, vibration and rapid changes in pressure or temperature are considerations
- Class R, Lightweight Environmental Resisting shorter in length and lighter in weight than Class E

MS/Standard MIL-DTL-5015 Type Connectors

Heavy Duty QWLD, MIL-DTL-22992 Connectors

Amphenole Heavy Duty Cylindrical MIL-DTL-22992 Connector Family:

QWLD

- · Designed for most power and control circuits
- Military MIL-DTL-22992 qualified versions and proprietary equivalents See Catalog 12-052 for complete information on these styles.

QWL

A more compact heavy duty design for industrial power and control applications

See Catalog 12-053 for complete information on these styles.

GENERAL ORDERING INFORMATION

Amphenol MS/Standard MIL-DTL-5015 type and Heavy Duty MIL-DTL-22992 type cylindricals are normally supplied with a full complement of power contacts, separately packaged. Coax contacts are ordered by part number as referenced in the part number charts on the following pages of this catalog, and are substituted for the power contacts at the time of the cable or equipment assembly. Coax contacts are pre-installed in these series. Installation instructions for the coax contacts for these series are provided in Amphenol document L-650.

HOW TO ORDER:

- Select the coax contacts designed for the cable being used from the chart on page 43 of this catalog.
 Select a connector insert from those shown on page 44 which will accommodate the quantity and size of coaxial contacts needed plus any power contacts required.
- 2. Determine the MS/Standard or Heavy Duty Series style desired. (See features of each series referenced above). The catalog referenced for each series will guide you in determining shell style, finish, service class and insert rotation required for your application. Catalog 12-020 MS/Standard MIL-DTL-5015 Type Connectors (catalog is on-line at www.amphenol-aerospace.com) Catalog 12-052 MIL-DTL-22992 QWLD Connectors (catalog is on-line at www.amphenol-aerospace.com) Catalog 12-053 QWL Connectors (catalog is currently not on-line; consult Amphenol Aerospace for hardcopy)
- 3. Consult Amphenol, Sidney, NY with the pertinent cable, contact, insert arrangement and connector style choices for complete connector part number.
- * Amphenol also offers the following other MIL-DTL-5015 Cylindrical Connectors which are threaded coupling (consult Amphenol Industrial for availability of shielded contacts in any of these series):
- Amphenol®/Matrix® MIL-DTL-5015 with crimp rear releasable and rear insertable contacts. (Ask for Catalog 12-026)
- Amphenol® MIL-DTL-5015 Modifications (Ask for Industrial Catalog 12-021)
- Amphenol® GT Series with reverse bayonet coupling (Ask for Catalog 12-024)
- Amphenol® AC Threaded and AC-B Bayonet Series (Ask for Industrial Catalog 12-025)

NOTE:

MIL-DTL-5015 supersedes MIL-C-5015 MIL-DTL-22992 supersedes MIL-C-22992

Coaxial Contacts for Standard MIL-DTL-5015, Heavy Duty MIL-DTL-22992 Cylindricals general description

Amphenol® Coaxial Contacts can be incorporated into MS/Standard MIL-DTL-5015 Type Cylindrical Connectors and Heavy Duty MIL-DTL-22992 Connectors. They offer the same durability advantages and design benefits for reliable interconnection as the Amphenol coax contacts used in high performance D38999 connectors. A variety of military and commercial shielded cables are accommodated within these cylindrical series.

Other features of the coax contacts available for MS/Standard and Heavy Duty cylindricals include:

- Several insert arrangements that can incorporate:
 - Size 4, 8 and 12 coax contacts
- Advanced shielding wire technology in a rugged military connector
- Single connector with multiple coaxial connection eliminates cross-mating
- Positive contact captivation especially important in these series with its much higher coupling/uncoupling force
- Older shielded cable type availability

Coax Contact, Pin for use in MS/Standard MIL-DTL-5015 and Heavy Duty MIL-DTL-22992 Connectors

Coax Contact, Socket for use in MS/Standard MIL-DTL-5015 and **Heavy Duty MIL-DTL-22992 Connectors**

TYPICAL ELECTRICAL PERFORMANCE

Size 4, 8 & 12 Contacts Contact Resistance:

Center @ 1 Amp, 170 millivolts max. voltage drop @ 25°C Outer @ 12 Amps, 150 millivolts max. voltage drop @ 25°C

Dielectric Withstanding Voltage:

Size 4 & 8: 1,300 VAC Rms @ sea level Size 12: 1,000 VAC Rms @ sea level

Size 4, 8 & 12: 250 VAC Rms @ 50,000 ft.

Insulation Resistance

5,000 megohms minimum @ 25°C

All contacts in these series are non-impedance matched contacts.

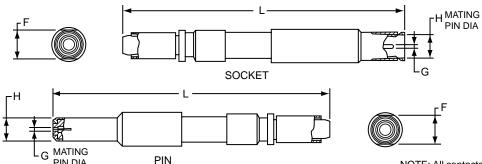

Part numbers 21-33063-XX() and 21-33064-XX() are moisture seal design (internal O-ring).

CONTACT FINISHES:

Suffix Finish

CONTACT ORDERING: Example number given in chart 21-33014-1 should be ordered as 21-033014-001; example number 21-33014-21 should be ordered as 21-033014-021. Adding Zeros is necessary for Amphenol ordering process on all contact numbers.

† Consult Amphenol Aerospace for current availability of this contact.

CRIMPING TOOLS: Italicized letters in parenthesis that follow positioner part numbers indicate applicable die closure. Commercial equivalents with the same die closure dimension may be used.

^{***} See finish options for MS/Standard and Heavy Duty contacts listed on page 42. Replace the parenthesis of the contact part number with the finish suffix number. However, you should consult Amphenol Aerospace regarding the availability of all finish choices for each part number.

^{†† 21-33047-}X and 21-33048-X are supplied with E (soft gold) finish on mating socket parts, and F (hard gold) finish on mating pin parts.

^{**}Termination instruction sheet L-650 can be found on-line at: www.amphenol-aerospace.com/service instructions.asp

Insert Patterns - Standard MIL-DTL-5015, Heavy Duty MIL-DTL-22992 Cylindricals Incorporating coax contacts

The following shows the most popular insert arrangements within the Cylindrical Connector families of MS/Standard MIL-DTL-5015 and the Heavy Duty QWLD/Heavy Duty QWL series of MIL-DTL-22992. See page 41 for these series connector descriptions and for reference to detailed connector catalogs. This illustrated listing represents the most readily available patterns within these series. If you require other arrangements than what are shown here, consult Amphenol for further availability. MS/Standard connectors have over 200 insert pattern arrangements available, and within these patterns any size 4, 8 or 12 contact cavities can be incorporated with coax contacts. However, you need to consult Amphenol, Sidney NY for availability and ordering information. All coax contacts in the Standard and Heavy Duty series come pre-installed in connectors.

Rectangular Connector Overview Printed Circuit Board and LRM Interconnects

Amphenol provides an impressive array of Rectangular Interconnection products to meet the needs of high density systems such as opto-electrical backplanes used in many applications that include: medical equipment, IC chip testers, telecommunications, military and commercial aviation, military ground vehicles, GPS systems, space and industrial applications.

Low Mating Force Rectangular Connectors with Brush Contacts

See Catalog 12-035 for complete information on this series.

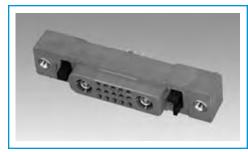

- · Designed to provide reliable interconnection means with printed circuit boards
- Qualified to MIL-DTL-55302
- Incorporates Brush Contacts multiple points of contacts and very low insertion force achieved through the intermeshing of 0.007 inch diameter wires
- Excellent durability over 20,000 cycles of mating/unmating without performance degradation
- High density available 2, 3 and 4 row contact arrangements with 10 to 100 contacts per row
- Four body styles allow for flexibility: applications for parallel boards, perpendicular boards, wire to board, end to end boards, card extenders
- · Hybrids are available combinations of signal contacts with coax, power or fiber optics

NOTE: MIL-DTL-55302 supersedes MIL-C-55302.

Power Strip Connectors - A Wide Variety of Contacts in the Thermoplastic Molded Housing of Rectangular Connectors

See Product Data #206 for complete information on this series.

- Designed to provide a modular interconnect with standard MIL-DTL-38999 Series II power contacts, and also available with brush contacts, coax contacts and/or fiber optic termini
- Allows for 2 to 12 Size 12 contacts or 2 to 24 Size 16 contacts per connector
- Offered with crimp, solder cup or solder tail termination
- · Available in a variety of color housings

Low Mating Force PCB Connector with combination of signal Brush contacts and Coax contacts

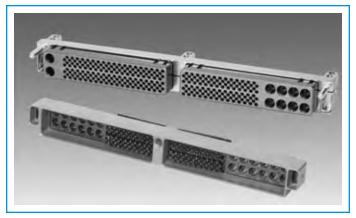

Power Strip Connector designed for a wide versatility of contacts can incorporate coax contacts

LRM (Line Replaceable Module) Interconnects

See Catalog 12-037 for complete information on this series, and consult Amphenol Aerospace for incorporation of high speed contacts in LRM interconnects.

- Line replaceable modular interconnects with very high contact densities, for attachment to printed circuit boards
- The brush contact is the standard contact for the LRM due to its low mating force, stable electrical performance and extended service life.
- Design flexibility with combinations of other types of contacts: power, high speed coax, triax, differential twinax, and quadrax contacts, fiber optic MT ferrules, high speed differential pairs, or high power RADSOK® sockets. Flex circuitry also available
- RF module inserts are also available with arrangements of RF and high speed shielded contacts in combinations with brush contacts
- Combinations of module and backplane inserts, tailored to meet customer needs
- One bay, two bay, three bay or more configurations with many shell designs available
- Staggered grid patterns (180 contact pattern grid in 8 rows) or more compact GEN-X patterns (236 contact pattern grid in 8 rows)

Two LRM Connectors with Inserts of Staggered Brush Contacts and Inserts of Coax Contacts

GENERAL ORDERING INFORMATION

Amphenol Rectangular Connectors are normally ordered with signal or brush contacts. To order connectors with shielded contacts:

- A. Select the coax contacts designed for the cable being used from the chart on next page of this catalog.
- B. Select the Rectangular Series desired. (See features of series referenced here.) The catalog referenced for each series will guide you in determining the connector style and arrangement required for your application. (catalogs are on-line at www.amphenol-aerospace.com)
 - Catalog 12-035 Low Mating Force Rectangular Connectors
 - Catalog 12-037 LRM (Line Replaceable Module Interconnects)
- C. Consult Amphenol, Sidney, NY with the pertinent cable, contact criteria, and connector style desired for complete connector part number.

Coax Contacts for Rectangulars Printed Circuit Board and LRM Interconnects

Amphenol® Coaxial Contacts can be incorporated into Amphenol Rectangular Connectors.

Rectangular Connectors offer these features for contact termination flexibility:

- Low Mating Force PCB connectors can incorporate:
 - size 16 and size 12 Coax contacts (same coaxial contacts as used in 38999 cylindricals)
- LRM module and backplane connectors can incorporate the following contacts (refer to Amphenol LRM catalog12-037 for most common insert patterns with high speed contacts, and consult Amphenol Aerospace for more information)
 - size 8, 10 or 12 Coax contacts (SAE AS39029 type)
 - · other coax types
 - size 8 Quadrax and Differential Twinax contacts
- · Flexibility of designing in combinations of contact types in one rectangular body

[†] Consult Amphenol Aerospace for current release of this contact or instruction sheet if applicable.

CONTACT ORDERING: Example number given in chart 21-33122-564 should be ordered as 21-033122-564; example number 21-33650-11 should be ordered as 21-033650-011. Adding Zeros is necessary for Amphenol ordering process on all contact numbers.

^{**}Termination instructions are packaged with each contact and can be found on-line at: www.amphenol-aerospace.com/service instructions.asp

Rectangular Connector Overview Rack and Panel Connectors

Amphenol provides an impressive array of Rectangular Interconnection products to meet the needs of high density systems such as opto-electrical backplanes used in many applications that include: medical equipment, IC chip testers, telecommunications, military and commercial aviation, military ground vehicles, GPS systems, space and industrial applications.

- ARINC 600 and R27 Rack and Panel connectors can incorporate:
 - · size 8 Coax contacts
 - size 1 and size 5 Coax (consult Amphenol Canada)
 - size 12 Twinax contacts
 - size 8 Quadrax contacts
 - size 8 Differential Twinax contacts

ARINC 600 Rack and Panel Rectangular Connectors

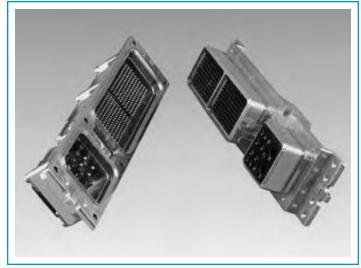

See Amphenol Canada Publication SL-379, ARINC 600 Rack and Panel Connectors for complete information.

- The ARINC 600 is the successor to the ARINC 404 for many of the new avionics designs and offers lower mating force contacts, increased contact count and a front release, floating keying system
- ARINC 600 Connectors are a recognized standard rack and panel connector for aircraft applications with both environmental and non-environmental versions available
- · Designed to meet all relevant ARINC 600 connector specifications
- · Front removable keying posts
- Up to 800 size 22 contact positions in one connector
- Contact options: standard contacts are power/signal crimp rear release in sizes 12, 16, 20 and 22 in crimp or PCB; or shielded coax, concentric twinax, quadrax contacts; or fiber optics
- Waveguide connections

R27 Rack and Panel Rectangular Connectors

See Amphenol Canada Publication for R27 Series Connectors for complete information.

- The R27 Series is a robust rectangular connector designed to meet or surpass all the requirements of the MIL-DTL-83527 specification and EN 3682 European Standard.
- Well suited for harsh environments enhanced environmental sealing, robust and durable shells, EMI shielding spring
- Filtered or non-filtered
- Connectors, shells, inserts, termination modules and contacts are sold separately or fully assembled
- Interchangeable insert patterns with ARINC 600 models
- Contact options: standard contacts are power/signal crimp rear release in sizes 12, 16, 20 and 22 in crimp or PCB; or shielded coax, concentric twinax, quadrax contacts; or fiber optics

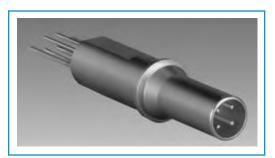

ARINC 600 Rack and Panel Connectors are high density connectors that can incorporate high speed shielded contacts

R27 Series Rack and Panel Connector can incorporate high speed shielded contacts

Coax Contact, Size 8 for use in ARINC Rack and Panel Connectors

Additional Contact Styles from Amphenol

Amphenol has today's broadest range of interconnection solutions for military, commercial and industrial applications. As a worldwide interconnection product leader, Amphenol can meet not only connector needs, but also contact needs of all types. In addition to the shielded and high frequency contacts shown in this publication, Amphenol offers many other contact styles:

PRINTED CIRCUIT BOARD SIGNAL AND POWER CONTACTS

Amphenol has a full range of printed circuit tail contacts for signal and power applications, available in both solder termination and compliant pin tails. They offer significant savings in system installed costs. Custom designs are available to meet customer needs. Catalog 12-170*, Amphenol® Cylindrical Connectors for PCB Applications, provides information on connectors available with PCB contacts which include MIL-DTL-38999, MIL-DTL-26482, and MIL-DTL-5015.

THERMOCOUPLE CONTACTS

Available for MIL-DTL-5015, MIL-DTL-22992, MIL-DTL-26482, MIL-DTL-26500, MIL-DTL-38999, MIL-DTL-83723 and other series connectors. Thermocouples are designed for temperature measuring applications, and are available in both pin and socket configurations in alumel, chromel, iron and constantan materials. Refer to each of the MIL series catalogs.

WIRE WRAP CONTACTS

Available for MIL-DTL-26482 and MIL-DTL-38999 series connectors. See catalog 12-090* (38999, Series I & II) for part numbers and dimensional data.

FLEX TERMINATION ASSEMBLIES FOR PCB APPLICATION

Flex circuits are available for MIL-DTL-38999, MIL-DTL-5015 and MIL-DTL-26482, as well as for special products such as EMI/EMP filter connectors and rectangular LRM connectors. The APC division of Amphenol manufactures and markets Amphenol printed circuit boards and flexible/rigid-flex products. Sculptured Flexible Circuits with built-in terminations plug into a printed circuit board and create a self-locking terminal pad which eliminates the need for an additional interconnect to the PCB. See catalog 12-170* and consult Amphenol for further information.

FIBER OPTIC TERMINI

Amphenol offers high performance fiber optic termini within MIL-DTL-38999 cylindricals and within LRM, PCB and rack & panel rectangular interconnects. Other space application fiber optic connectors and hermaphroditic connectors are available with fiber optics, as well as Amphenol backplanes and VITA-46 interconnects. The fiber optic termini choices include:

- MIL-PRF-29504 pin and socket termini. High precision, pre-radiused ceramic ferrules to help improve insertion loss performance and reduce polishing time. Single mode and multi-mode versions.
- HD20 pin and socket termini with the same benefits of the MIL-PRF-29504 termini, but smaller for increased density
- 90° pin and socket termini
- ARINC 801 termini genderless fiber optic termini that use a precision 1.25 mm ceramic ferrule. Precision inserts with guide pins and keyed termini. Multi-mode and single mode.
- MT ferrules Industry standard, very high density plastic ferrules available in either 12-fiber or 24-fiber versions, in multi-mode PC, single mode PC, and single mode APC configurations.

49

Many connectors can have combinations of fiber optics and other contact types. See catalog 12-352, Amphenol® Fiber Optic Interconnect Products for Military, Aerospace and Harsh Environments. (online at www.amphenol-aerospace.com)

12-170 and 12-090 will be combined within Catalog # 12-C1, Amphenol's new combined 38999 connector catalog; consult Amphenol for more information.

Additional Contact Styles from Amphenol, cont.

Amphenol offers broad flexibility to connector users. Our contact engineers can help in the selection of the best contact style and functionality for your interconnect needs. Here are more Amphenol contact choices:

FILTER PI TYPE TUBULAR AND PLANAR ARRAY CONTACT ASSEMBLIES

Amphenol filter/transient protection connectors utilize filter contact designs to provide protection for sensitive electronic circuits; protection in VHF, UHF, HF and other filter ranges. Amphenol filter connectors offer the advantage of internal housing of the filter device within a wide range of connector packages - virtually all major Mil-spec cylindricals and rectangular series. Housing the filter protection within the connector eliminates costly and bulky exterior discrete protection devices. Header assemblies (see right) allow for easy separation and easy termination of connectors when attaching to flex or pc boards. They allow for electrical testing that would adversely affect sensitive diodes, MOV's or filter capacitors. See Amphenol EMI Filter/Transient Protection Connector Catalog 12-120* for further information.

RADSOK® HIGH POWER CONTACTS

Amphenol's RADSOK® contact design is a hyperbolic, stamped grid configuration within the socket cylinder. As the male pin is inserted, axial members in the female socket half deflect, imparting high current flow across the connection with minimal voltage loss. Another advantage of the RADSOK® contact is low insertion force. The RADSOK® contact has been incorporated into three of the large industrial families of connectors; the GT series, the P-Lok series and 5015 types. These connectors, known as Amphe-Power® connectors, can handle up to 150% higher amperages. Amphenol Industrial Operations division also provides a wide range of power to board interconnects utilizing the RADSOK® technology. These provide high amperage connection to busbars, wires and circuit boards. See Amphenol Industrial Brochure, SL-391. (online at www.amphenol-industrial.com) RADSOK® contacts are being further introduced into military/aerospace products. High power RADSOK® is now developed into applications for engine connectors for Commercial Air, and are also being designed into LRM interconnects for high speed data transfer.

LOW MATING FORCE HIGH CYCLE, BRISTLE BRUSH CONTACTS

Amphenol bristle brush or B³ contacts are made up of multiple stands of high tensile wire that are bundled together. 70% to 90% reduction in mating/unmating forces is achieved over conventional contacts, and the brush contact has proven durability and long contact life. Hybrid Low Mating Force connectors can be designed with combinations of brush and coax/twinax/power contacts or fiber optic termini. See pages 45 & 46 of this publication, and refer to Amphenol catalog 12-035, Low Mating Force Rectangular Connectors for more information on Brush contacts (online at www.amphenol-aerospace.com).

LRM Surface Mount Connectors also use brush technology as the standard contact type, but can have other contact types combined in the module and backplane inserts. There is a high level of design versatility in LRM designs - one bay, two bay, three bay, or more configurations with many shell designs, plus the ability to combine contact types. See pages 45 & 46 of this publication, and refer to Amphenol LRM catalog 12-037.

STANDARD CRIMP CONTACTS

Crimp contacts are used throughout the connector industry for standard interconnection. Amphenol supplies crimp contacts that are designed and qualified to various military/customer specifications and M39029 slash sheets. Numerous contact sizes and finishes are available for use with front or rear release connector applications.

* 12-120 will be combined within Catalog # 12-C1, Amphenol's new combined 38999 connector catalog; consult Amphenol for more information.
